Hardware Kit #AKP-HDWR-CINS

Tools Required

- Wrench with ⅜” socket
- #2 Phillips screwdriver or drill/driver

**Note:** Mount your adjustable keyboard arm to your worksurface using the instructions that came with your adjustable keyboard arm.

1. Configuring Models for Left Handed Use

   Classic Platforms are preconfigured for right handed use but can easily be converted to left handed use.

   - **a** Remove the Wrist Rests, (on models with two) Mouse Trap and hole covers.
   - **b** Swap positions of the Wrist Rests, Mouse Trap and plugs and reinsert for left handed use.

2. Mount Keyboard Platform to Arm

   - **a** Place the Keyboard Platform (A) on the keyboard arm and align the six holes in the bottom of the platform with the six holes in the arm.
   - **b** Attach using the #10-32 × ½” Pan Head Screws (C) through the Washers (D) and holes in the arm. Tighten securely using Phillips head screwdriver.

Model # CB182-25, CB185-25  
Model # CB482-25, CB485-25  
Model # CB318-25  
Model # CB488-25
3 Place Mouse Pad

Peel the backing off the Mouse Pad (B) and place in either the right handed or left handed location. The Mouse Pad provides improved traction and pointing accuracy. It can be repositioned by simply peeling it up and placing it elsewhere.

4 Attach Cord Clips and Rout Cords

Note: Make sure your keyboard arm is fully extended before routing your cables.

a Place Cord Clips (E) at the back edge of the Keyboard Platform (A) on either side of arm to rout cables along left or right side of the Arm.

b Place one Cord Clip (E) on the side of the arm mechanism. Place the other Cord Clip on the rear of the track. Do the opposite side in the same fashion if cords run down the left side.

Caution: Adhesion is designed to bond immediately. You will not be able to reposition the clip once it’s in place.

5 Apply Friction Pads or Hook & Loop Squares

Place Friction Pads (F) on the bottom surface of your keyboard to keep it in place, if necessary. The Friction Pads will keep your keyboard from sliding when the platform is angled.
