## PRODUCT UPDATE

### HEIGHT-ADJUSTABLE WORK CENTERS

WorkRite Ergonomics' Sierra™ height-adjustable work centers adjust from 22 to 48 inches and feature a backlit LCD control panel with three programmable memory height presets. A computer-controlled motor moves the work center at more than 2 inches per second. By changing crossbar lengths and bracket configurations, work centers can be converted from small to large, and two-, three-, or four-leg configurations.
