Sierra Series by WorkRite Ergonomics

The Sierra™ Series of height-adjustable work centers from WorkRite Ergonomics adjusts from 22 to 48 inches to satisfy the needs of today's office worker, from short (5 feet) to tall (6 feet and taller). Sierra eliminates the need and expense of temporary solutions (such as altering fixed-height tables, providing special seating, and using footrests) by allowing users to make minor adjustments in height. A recent WorkRite Ergonomics survey of 500 office workers found that 57 percent of respondents would prefer to spend at least part of their time standing, if given the opportunity; Sierra tables give users that choice. A quiet, computer-controlled motor moves the work center at 2 inches per second.

"WorkRite has made workstations accessible for all users. Features like digital height read-out, programmable memory height presets, and LCD read-out give the Sierra Series a technological edge."
