Furnishings

Sierra Series

WorkRite Ergonomics' Sierra Series work centers provide 5th to 95th percentile height adjustability for the complete work surface. The work center's entire working surface can be smoothly and quietly raised or lowered to meet the ANSI/BIFMA height range requirements. The computer-controlled motor moves the work center at two inches per second, quickly making the transition from seated to standing position heights. With its transitional styling, wide range of available shapes and silver or charcoal metal finish, the Sierra will adapt to virtually any office environment. Worksite Ergonomics Inc., Petaluma, Calif.
